Abundance of common and soprano pipistrelle foraging and social behaviour (chasing) during dusk survey over buildings and gardens (particularly first hour after sunset). Occasional Myotis species recorded later on in survey.
2
High foraging activity particularly of soprano pipistrelles half an hour prior to sunrise.
Building 1a
Building 1b
No bats emerged on dusk survey of 10 Sep 2015.
No bats emerged during 10 September dusk surveys. Activity included frequent foraging common pipistrelles, and single passes of long-eared, soprano pip and Myotis species.
Long-eared emerged at dusk on 21 July 2015
Long-eared emerged pre-dawn on 30 July 2015
