1. DESIGN

1.1 Use & Amount

The proposal is for the erection a polytunnel to be positioned adjacent to the existing polytunnels at Proctors Nursery.

The polytunnel will be used for the growing-on of bedding plants and basket plants. i.e. tender/half-hardy plant stock. The polytunnel is needed for the ever increasing range of basket and bedding plant production, which requires the protected environment from the cold temperatures and the winds. Young plants are propagated on-site or bought-in (i.e. plugs), such as begonias, pansies, petunias etc, and within the polytunnels, with protection from frost, they then grow into saleable plants as used in baskets etc.

The polytunnel follows-on from the latest polytunnel as approved on 10 October 2016 (ref: 2016/0508). Also, recently a planning application has been submitted for a glasshouse at the site (ref: 2016/0704).

1.2 Scale & Appearance

The proposed polytunnel will measure as follows:

36.5m x 7.9m (120' x 26')

The height of the tunnel will be 4.4m (14' 5").

The polytunnel will be covered with opaque plastic.

1.3 Layout

The proposed polytunnel will be sited immediately adjacent to the polytunnel as approved in October.

1.4 Landscaping

The proposals are not considered to require any landscaping work given that the structure is to be situated adjacent to existing structures at the nursery. Also a landscaping scheme has been approved and established following consent for the previous polytunnels at the site.

2. ACCESS

Access to the site is via the existing access to the nursery off Leek Road.
