Thank you for your enquiry regarding Composite Panel.

Steel is an essential material, intrinsic to our way of life and to the products society will demand in a sustainable future. Steel is a material that is used, not consumed as it is recycled and used time after time.

The composite panel system provides optimum performance, for water drainage, strength and walkability. Its bonded PIR insulation core uses the latest foam technology providing enhanced environmental benefits, together with fire performance approved by LPCB..

Key Benefits;

Panels are fully fitted with closed cell foam, eliminating condensation and providing a consistent insulation performance over the building envelope.

LPCB (loss prevention Certification Board) approval to LPS 1181 part 1 helps reduce insurance premiums and assures reaction to fire performance.

Fire resistance and 4 hours integrity achievable with standard fixing and sealing methods.

A sustainable solution with responsible sourcing and traceability of materials.

The state of the art PIR core has zero ozone depletion potential (ODP) and a very low global warming potential (GWP) of less than 5.

Overall the Composite Panel system offers excellent economic and environmental performance for trouble free building construction.
