HOME FARM, HIGH STREET, DILHORNE, STOKE-ON-TRENT. ST10 2PE

CONSTRUCTION & ENVIRONMENTAL METHOD STATEMENT.

Controlling dust and emissions

Any dust produced as a result of construction and vehicle movements will be kept to a minimum by damping down with water.

Stockpiles of materials will be kept damp to prevent windblown dust.

Controlling noise

All equipment will be maintained in good mechanical order and will be fitted with appropriate silencers, mufflers or acoustic covers.

Stationary noise sources will be sited as far away as possible from noise sensitive properties, and where necessary, acoustic barriers will be used to shield them – such barriers will be purpose-made, or consist of site materials such as bricks or earth mounds.

The movement of vehicles to and from the site will be controlled and will not take place outside the permitted hours unless with prior approval.

Employees will be supervised to ensure compliance with any noise control measures.

No bonfires

No burning is to take place on the site. All waste materials will be removed from the site and disposed of at an authorised disposal site.

Vehicle wheel washing

All vehicles leaving the site will be checked for cleanliness of tyres and chassis, and where necessary these will be jet washed on site to ensure that no materials are carried from the site onto the highway.

Waste materials

There are no demolition works to be carried out on this scheme.

All construction site waste will be removed from the site and disposed of at an authorised disposal site as and when it accumulates.
