Dear Sir/Madam,

I have recently received a letter from yourselves with reference to the above as I live in the adjoining property number 11. I have read the proposal with interest and would like to raise several points.

The build for this proposal is already under construction but was halted. The brick in the picture looks all very nice however the other side of the wall tells a different tale.

I live in 11 Overton Bank and have a lean-to with windows to the side and front which was in situ when I moved in to the property which is some 15 years ago. The build at number 10 has completely block the side window and there is grey breeze block with random bits of cement in the gaps and stuck on my window which I am never going to be able to get off.

In the third paragraph of Introduction /Context it states that none of the buildings would be adversely affected by the development however my property has been very adversely affected. I attach photos for your consideration.

Surely people cannot just brick up someone's window in such a horrendous fashion. Should I wish to sell my property it would have a massive effect on the outcome.

Yours faithfully,

Georgina Ward.
