Comments: The external south side wall of the dining room extension will have a major impact on the light entering my living room window. The tunnelling effect of the external wall of my own kitchen, approx 3 meters deep and 3 meters high combined with the new south wall of the planned extension 3 meters deep 3-4 meters high will form a 3 sided enclosed space 3 meters deep and 2 meters wide.

I feel that the impact of this part of the extension on my living space would be significant and is unacceptable.
