HERITAGE STATEMENT

PROPERTY/ASSET

The Travellers' Rest is a public house originally constructed in 16 century. It is located in the centre of Stanley Village conservation area. The building is a stone traditional structure with a pitched tiled roof and comprises a public house, restaurant and inclusive first floor living accommodation. Internally there are the original low ceilings, timber beams, fire places and other features which have been retained during several refurbishments in recent years.

AREA TO BE AFFECTED/PROPROSAL

The proposal is to add a small lean to, single storey store room size 4m x 2.4m at the rear of the main building. This addition will be used to provide extra, much needed storage facility for the on site restaurant and will be used to store fruit and vegetables plus dry goods. The new building will be constructed in materials to match the adjacent structure.

IMPACT ON FABRIC

This new small extension will have a negligible impact on the fabric of the existing main building due to its size and location and will simple blend in with the adjacent single storey rear part of the main building. It will only be able to be viewed from the rear car park and so its overall impact is limited. No heritage asset will be harmed in any way by its addition and the main building will remain unaffected.
