Conditions 4 and 8

Please see attached plan showing stoned areas and the attached specifications provided by the supplying quarries w2hich proves its origins and uitability. It is proposed to have a 150mm deep 5m re-inforced concrete pad to the front (north-east) wall of the building and extending into the building to form a floor.

Condition 5

Please see attached plan 1359-2D and the Ecological Report prepared by Absolute Ecology.

It should be noted that livestock fencing and hedging on the west/north-west side of the proposal is positioned to protect the septic tank and drainage system from animal and vehicle damage.

The proposed copse trees will have protectors until such time as they are sufficiently well established.
