The farm has been continuously used for agriculture for more than a 100years

The shed would allow for the housing of animals (based on DEFRA standards)

This is a working farm currently housing a 130 sheep 2 donkeys and 12 chickens.

The farm is around 18 acres including some woodland.

Also rent a further 12 acres of land

The farm is currently eligible for the Small Farm payments with 5.5 acres of eligible land that is grazing ground and meadows used for producing hay for the winter fed.

The main purpose of the replacement shed would be for housing live stock in inclement weather, lambing, storing fodder and farm machinery

The removing of the old nissen huts and replacing with one new shed would considerably tidy up and enhance the plot not only for the farm but also the neighbours and visitors to the area
