	CONTROL OF DEBRIS ON HIGHWAY
	Prior to leaving the site the vehicles will be checked to ensure that the
	wheels are clean and free from debris. If necessary wheels will be cleaned
	using a mobile pressure washer.
Site Hoarding	A security hoarding will be erected along the front of the development, which will be constructed from close boarded fence panels and heras fencing, which will screen all activates from the general public. The site will be secured with a lockable gate which will be locked at the end of each working day.
Public Protection	As there is no public footpath in front of the proposed site we assume limited pedestrian access in the area. Banksmen will always be present to guide deliveries in and out of the site.
Services	There are currently no live services on the site, these are in the process of being applied for from the relevant utility companies
Welfare	In conjunction with CDM Regulations 2015 all site based welfare and toiletry facilities will be site up proper to the project commencing for use by all site operatives and visitors as necessary. These will include seating, clean water (hot and cold) a means to heat food, washing facilities and a drying room.

## **Environmental Information**

Waste & Pollution		d the materials being remove from site and the possible	
include control	impact. Waste products arising from our works will include soil, hardcore		
measures	and concrete rubble.		
	All materials will b	be processed by material and recycled where practicable	
	possible, all other	materials will be disposed of at the appropriate facility	
Noise, Dust, Smoke	Noise	Although noise levels emitted from the site will be	
		higher than those normally experienced by neighbours	
		all noisy works will be carried out between the hours of	
		8.00 and 17.00.	
		Prior to works commencing all residents will be	
		informed via a letter drop with key contacts for ASD	
		Contracts should they have any concerns	
	Dust	Dust will be monitored by the Site Manager through	
		the project. Dust levels are to be reduced to the	
		minimum possible by careful selective use of water	
		sprays and dust extraction	
		Dust emissions will be monitored with use of a dust	
		emission monitor for eg Model 4200 Dust and Emission	
		Monitor	
	Smoke / Vapour	There will be no burning of any materials on site	
		therefore eradicating the risk of smoke	

Fuels, Oils, Storage and Containment	Fuels are to be stored in intrinsically safe double bunded steel tanks and kept in a suitable area away from the works. All plant is to be refuelled using the electric pumps fitted to the tank, which is secured with a stout lock. All spillages to be reported to the Site Manager immediately. Storage areas are to be fully protected from collision or spillage and a clean up spillage kit provided along with emergency numbers.
General Materials	All materials to be used in the construction will be stored in a lockable 20ft storage container. All plant and materials will be stored and locked away at the end of each working day.
