

Bat Boxes

Bat boxes can be supplied in brick fronted, half bond and quarter bond brickwork or alternatively with a stainless steel mesh fitted to the front. The mesh is designed for optimum adhesion in render and stonework applications. A basic version can be fitted directly behind weatherboarding or into studwork. For a quotation please [click here](http://www.birdbrickhouses.co.uk/commercial-bird-homes/quotations-and-ordering/) (<http://www.birdbrickhouses.co.uk/commercial-bird-homes/quotations-and-ordering/>).

Bat box, Stretcher bond brick fronted

These bat boxes are best positioned in sunlit clusters, at a height of 3-6 metres and ideally facing a variety of aspects as bats will move around a building as the seasons change. Please [contact us](http://www.birdbrickhouses.co.uk/about-us/contact-us/) (<http://www.birdbrickhouses.co.uk/about-us/contact-us/>) if you wish to discuss your bat box plans – we have considerable expertise on the team.

This product makes an ideal bat house for most of the UK's bat species, including Pipistrelles, who will use it for roosting, hibernating and (in maternity roosts) bringing up their young. The entrance hole and internal design can be tailored to suit different species of bat e.g. Bechstein's and Serotine.

The box is self-cleaning thanks to an internal tilt board at the base; this works by diverting droppings out of the entrance hole. The back of each box is lined with wood; in front of this sits a removable untreated sawn timber baffle board which divides the main area into two, giving extra roosting space.

The bat boxes are supplied with a non-removable front as standard, as access is only permitted by licensed bat workers. Should removable fronts be required, please let us know at the point of order.
