

HERITAGE STATEMENT

PROPERTY/ASSET

The Travellers' Rest is a public house originally constructed in 16 century. It is located in the centre of Stanley Village conservation area. The building is a stone traditional structure with a pitched tiled roof and comprises a public house, restaurant and inclusive first floor living accommodation. Internally there are the original low ceilings, timber beams, fire places and other features which have been retained during several refurbishments in recent years.

AREA TO BE AFFECTED/PROPOSAL

The proposal is to add a glazed lean to roof to part of the front elevation to provide covering to the open seating and amenity area which is currently open to the elements. This will enable customers to be able to use this area on a year round basis.

IMPACT ON FABRIC

The glazed canopy will be retro styled and will have four black metal round section decorative column supports. The clear glass roof will be supported using black metal glazing bars. The overall appearance will not be detrimental to the existing building and the elevation will not be harmed by this addition. No heritage feature will be affected and no removal or demolition of existing features will be necessary.
