Planting Proposal at the Development of Victoria Business Park, Prospect Way, Knypersley,
Staffordshire for Mr Tyler

For the boundary hedges and migratory belts, the shrub types used will consist of Hawthorn, Dogrose, Hazel, Malus Sylvestris, Viburnum Opulus, Ilex Aquifolium (Holly). All the above mentioned will be of a size 60-90 1 + 1. A selection of Birch, Mountain Ash, Acer Campestre will also be planted at approximately 5-10 metres apart and of a size of 6-8cm girth.

To aid rapid establishment of the hedging, all will be staked and tied with rabbit guards applied where deemed necessary. All plantings will be completed between the months of November to January, in the dormant season to ensure the shrubs have the correct environment to allow for quick growth and establishment. It is also recommended that mulching is placed around the planting area which will help the development of hedging by inviting ground insects and worms to improve ecosystems and soil quality.

Yours Faithfully

B Proctor
