Submission: Objection

Comments: In addition to the comments I made in objection to this plan I make two further observations.

1. The position of the inverters are dispersed over the entire site close to each bank of batteries which means the likely origin of noise electrical, interference etc is as much, closest to the nearest residential dwellings i. e. Approximately 150 yards!

2. Should this application be considered essential surely a preferred location would be immediately next to the northern boundary of the National Grid transformer site not the eastern side as currently proposed, where the cabling distance would be less and the inconvenience and nuisance to local residents minimised as the distance to dwellings would be much greater. The land on the northern side of the National Grid site is also under the same current private ownership!
