

From Mr Delaney

DET2021/0021 Telecommunications Determination
29th June 2021

Good afternoon Mr Swithenbank,

I note that as of the 21st June, the Applicant has submitted an amended proposal to reduce the height of the Monopole from 18 metres to 15 metres.

This raises further questions regarding the statement related to height quoted in STM16495 SSSI New Site 2020.

3. Proposed Development. states "the height of the pole (18 metres) has been kept down to the absolute minimum capable of providing the required essential new 5G coverage"

So, either this is another untrue statement or alternatively, it is true, in which case the Applicant is applying to install equipment, which by his own admission, is not capable of providing the required coverage and is being presented as an interim stage, which presumably will need further action, involving either the specimen Oak Tree only metres from this location or extending the height of the Monopole.

This Application goes from bad to worse in respect of true and accurate statement of facts.

Regards,
Mike Delaney
