

Harrison Park, Application For Plastic Grass Cures

27.6.21

Dear Mr. Johnson

My objection to this application must
shorly merit a Rethink by the management
of this Foot ball pitch in the light of our
present Serious state of our climate. I

have just heard from one of my friends that
his grandson plays foot ball on a plastic
Surfaced Pitch, and he dislikes it immensely.
also given that ^{this} area is in the middle of
a heavily Carboned area, the need to hang
onto as much carbon Catchment ^{material as in grass} is paramount.

We are presently witnessing the Break up of
50 Kallawhat Turbines that both the Peak Park
and yourselves are insisting land owners
erect, the Blades on these Turbines like the
plastic grass that is being Requested ^{For Harrison Park} get very
Brittal after being exposed to the elements in
just a short time where-as grass in it Natural
form absorbs Vast Quantaty of Carbon. and as I
have already stated in hot Weather plastic gives
off larg amounts of Dyoxins also a Point that
I have not mentioned is the Fact that Water Run off
will increase 100 Per Cent, therefor on environmental
ground alone this application should be Turned
down down Not addressed by Delegated Powers as
maybe the case
