26th June 2021

89 Tape Street – Planning app SMD/2021/0365

In response to your query regarding the installation of the roller shutter door I can confirm that this is being installed to aid with storage within the proposed storage area.

You have noted that currently the parking is “constricted”. This is due to 3 bollards installed at the front of the car park, and a metal fence and gate halfway down the car park. It is currently possible to complete a 3 point turn on the car park in a large car, however we are intending on improving the parking and turning by:

Removing the bollards

Removing the metal fence and gates

Installing a roller shutter to enable vehicles to partly draw into the building which in turn will enable an easy reverse movement to the rear of the car park. This will ensure vehicles are facing the forward when re-joining Tape Street.

There will be no heavy vehicles on site as stock is sent and received by couriers.
