

The extension to the original Sheep/Lambing shed is required in order to provide adverse weather cover for the sheep. The main field where the sheep are located has very little natural shelter for either very wet conditions or very hot days which can cause health issues with our small flock, this has become evident over the last couple of years since we started to keep sheep.

The shelter is open fronted so available year round for the sheep to access.

The shelter is in keeping with the current design and we believe provides no loss of view for any of the neighbouring properties.
