Dear Sir / Madam

We are applying for planning permission to install a telecoms shelter as part of both the Council owned SPON and the VX Fiber owned FTTP telecoms . We propose to install this on the large grass area opposite the junction of Hamil Drive and Hencroft.

We have attached to our online application a location plan, a site plan, a diagram showing the shelter and its dimensions, an FAQ document with further details of the shelter construction, and a diagram showing the proposed palisade fencing.

A site survey suggests that the shelter can go next to the existing substation and will be of similar size and also be surrounded by fencing. No issues with parking or access leading up to the shelter were identified.

The shelter is to contain active telecoms equipment, and will therefore require power, and contain backup batteries. It will be earthed, and secured, and will only require sporadic access. It will not require plumbing, nor generate waste, as it will not be in constant use.

The foundations are four concrete plinths which will minimise further impact on the surroundings, and the plinths and shelter arrive pre-built which should minimise installation works.

Yours sincerely

Richard Wilson

Design and Planning Engineer
