Dear Sir / Madam

We are applying for planning permission to install a telecoms shelter as part of both the Council owned SPON and the VX Fiber owned FTTP telecoms . We propose to install this on the grass area off Fowlchurch lane which is on the left after the turning for the main car park to Brough Park leisure centre.

We have attached to our online application a location plan, a site plan, a diagram showing the shelter and its dimensions, an FAQ document with further details of the shelter construction, and a diagram showing the proposed palisade fencing.

A site survey suggests that the shelter can go on this grassed area and it would sit in between existing trees in the position shown on the block diagram . No issues with parking or access leading up to the shelter were identified.

The shelter is to contain active telecoms equipment, and will therefore require power, and contain backup batteries. It will be earthed, and secured, and will only require sporadic access. It will not require plumbing, nor generate waste, as it will not be in constant use.

The foundations are four concrete plinths which will minimise further impact on the surroundings, and the plinths and shelter arrive pre-built which should minimise installation works.

Yours sincerely

Richard Wilson

Design and Planning Engineer
