22 December 2021

Dear Ms Berry

PLANNING APPLICATION: SMD/2021/0617

Outline application with all matters reserved for replacement dwelling at The Bungalow, Dairy House Lane, Dilhorne, Staffordshire, ST10 2PW

Thank you for your consultation letter of 8 December 2021 seeking the views of the Coal Authority on the above planning application.

The Coal Authority is a non-departmental public body sponsored by the Department of Business, Energy & Industrial Strategy. As a statutory consultee, the Coal Authority has a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas.

The Coal Authority Response: Material Consideration

The application site falls largely within the defined Development High Risk Area; therefore within the application site and surrounding area there are coal mining features and hazards which need to be considered in relation to the determination of this planning application.

The Coal Authority's information indicates that the site lies close to the outcrop of a coal seam which may have been worked in the past. In addition, our records indicate

that the site lies marginally within the boundaries of a wider site from which coal has been extracted by surface (opencast) methods.

The planning application is accompanied by a Coal Mining Risk Assessment report (16 November 2021, prepared by the Coal Authority's commercial arm), which draws upon relevant sources of coal mining and geological information, including Mine Abandonment Plans.

The report author highlights that that no opencast extraction has taken place within the application site and is satisfied that the outcropping coal seam is unlikely to have been worked beneath the development site by underground methods. The report concludes that the overall risk to the site from legacy coal mining features is low and confirms that intrusive site investigations are not required.

Mine Gas

It should be noted that wherever coal resources or coal mine features exist at shallow depth or at the surface, there is the potential for mine gases to exist. These risks should always be considered by the LPA. In this particular instance, the submitted report advises the developer to undertake a detailed Gas Risk Assessment.

The Planning & Development Team at the Coal Authority, in its role of statutory consultee in the planning process, only comments on gas issues if our data indicates that gas emissions have been recorded on the site. However, the absence of such a comment should not be interpreted to imply that there are no gas risks present. Whether or not specific emissions have been noted by the Coal Authority, local planning authorities should seek their own technical advice on the gas hazards that may exist, and appropriate measures to be implemented, from technically competent personnel.

The Coal Authority Recommendation to the LPA

The Coal Authority's Planning & Development Team considers that the content and conclusions of the Coal Mining Risk Assessment report are sufficient for the purposes of the planning system and meet the requirements of the NPPF in demonstrating that the application site is safe and stable for the proposed development. We therefore wish to raise **no objection** to the proposed development. However, further more detailed considerations of ground conditions and foundation design may be required as part of any subsequent building regulations application.

Please do not hesitate to contact me if you would like to discuss this matter further.

Yours sincerely

James Smith

Planning and Development Manager

Disclaimer

The above consultation response is provided by The Coal Authority as a Statutory Consultee and is based upon the latest available data on the date of the response, and electronic consultation records held by The Coal Authority since 1 April 2013. The comments made are also based upon only the information provided to The Coal Authority by the Local Planning Authority and/or has been published on the Council's website for consultation purposes in relation to this specific planning application. The views and conclusions contained in this response may be subject to review and amendment by The Coal Authority if additional or new data/information (such as a revised Coal Mining Risk Assessment) is provided by the Local Planning Authority or the Applicant for consultation purposes.

In formulating this response, The Coal Authority has taken full account of the professional conclusions reached by the competent person who has prepared the Coal Mining Risk Assessment or other similar report. In the event that any future claim for liability arises in relation to this development The Coal Authority will take full account of the views, conclusions and mitigation previously expressed by the professional advisers for this development in relation to ground conditions and the acceptability of development.
