1.0	Listed Buildings in the Parish of Farley
	Alton and Farley are Anglo-Saxon names. Alton means Aelfa's settlement, and Farley refers to a clearing in the woods. The medieval parish of Alton contained 7,619 acres and consisted of four townships, Alton, Farley, Cotton, and Denstone, served by the parish church of St. Peter in Alton. In 1894 the civil parishes of Alton and Farley were created from the former townships, but were still served by the parish church of St. Peter in 1996. Farley is a civil parish in the district of Staffordshire Moorlands, Staffordshire, England. It contains 54 listed buildings that are recorded in the National Heritage List for England. Of these, five are at Grade II*, the middle of the three grades, and the others are at Grade II, the lowest grade. The listed buildings in Farley are mainly houses, cottages, and associated structures, farmhouses and farm buildings. The buildings range from around the 1700's with renovation work carried out to many of the structures in the 1850's. From Alton and Farley Conservation Area Appraisal: In 1851 the hamlet of Farley revolved round Farley Hall, much of it does today. Its owner, John Bill, was a barrister, and lived there with his wife Sarah, his daughter, two sons, and servants (cook, housemaid, laundry maid, kitchen maid, footman, and ladies maid). Farming employed most of those not directly serving John Bill (his land agent, gardener, and coachman). The village contained one farmer and butcher with 100 acres, and one innkeeper and farmer with 95 acres. The former had three labourers, four agricultural servants, and two domestic servants, the latter two

	labourers, three agricultural servants, and three house servants, both also employed family members. Other inhabitants of Farley were mainly agricultural labourers serving outlying farms. From Alton and Farley Conservation Area Appraisal: ‘Alton and Farley Conservation Area was designated in 1971. The Town and Country Planning Act 1990 identifies a Conservation Area as ‘an area of special architectural or historic interest the character of which it is desirable to preserve or enhance’. The act places specific duties on the local authority with regard to its management. These include the preparation of a Conservation Area Appraisal to inform both the general public and those involved at an official level, and as a basis for a subsequent management plan. Further details about the legislation and its implications are included in Appendix 1. The Conservation Area consists of three main elements lying either side of the Churnet Valley. To the north is Farley Hall with its estate hamlet, in the centre is Alton Towers and its park, and to the south is the village of Alton with Alton Castle. Each area has its own distinctive character and history, influenced by changing patterns of ownership and use.’ From the Farley Parish Council website: In 1870-72, John Marius Wilson’s <i>Imperial Gazetteer of England and Wales</i> described Farley like this: FARLEY, a township in Alton parish, Stafford; near the Uttoxeter canal, 4¼ miles ENE of Cheadle. Real property, £3, 029. Pop., 390. Houses, 82. There is a Roman Catholic chapel. Farley Hall The formal garden at Farley sloped sharply upwards behind the house and was walled. The glasshouse now at Farley Hall is of unknown date
--	--

	but it is almost a perfect semi-globe as recommended by Loudon in his remarks to the Horticultural Society in 1815. The Farley estate passed to Richard Bill of Norbury, Derbyshire by marriage in 1607. He built Farley Hall shortly afterwards. There were extensive alterations in 1784 by Thomas Gardener of Uttoxeter. Members of the Bill family were land agents for the Earls of Shrewsbury and Gower and the Marquess of Ailsbury. Read more about Farley as described in Kelly's Directory of Staffordshire (1896) Ramsor Primitive Methodist Chapel The Primitive Methodist Chapel is the main if not the only building other than farms and dwellings to survive from the 19th century. It is now in private ownership, and has been lovingly restored as a place of worship where services are occasionally held. This writer was present for services on 3rd December 2006 and 31st May 2007. The second occasion was the conclusion of a walk from Mow Cop to Ramsor on the bicentenary of the first Primitive Methodist Camp Meeting. The present pulpit is not the original, but one rescued from a similar chapel at Gun End, near The Roaches to the north of Leek, Staffordshire. This looks as if it had been purpose built for Ramsor Chapel. The lighter panels are wood carvings. The present Chapel is the Jubilee Chapel, built to commemorate Queen Victoria's Golden Jubilee in 1887. It stands across the road from Chapel Farm, in the grounds of which stood the first Chapel.

2.0	Design Approach
	The proposal is for a two bedroom cottage in the property know as the Barn, formerly stable. The design approach is to use the existing openings in the fabric of the building, so that the proposal minimises any effect on the exterior. This is in accordance with the principles of Historic England’s Good Practice Advice (GPA) and Enabling Development and Heritage Assets. Historic Environment Good Practice Advice. (see below) Although the property is an agricultural building it still has a formal domestic facade which works with its use as a cottage. The main front door is hinged on the exterior, so that the original door will be will be kept and a glazed door inserted behind it for weather proofing. The door to the side will also be hinged with a glazed door behind. The existing openings to each exterior side of the building, front and back, will be retained. All gutters, down pipes, windows, doors, shutters and joinery are to be painted in Farley Estate. The interior of the property will have an open plan living area on the ground floor, which is also sensitive to the historic nature and fabric of the building. The kitchen is galley style and open plan. There is a small downstairs lavatory. New stair to first floor with access into each bedroom lowered to as not to impinge on or alter the Queen Truss.

	A new opening for upper bedroom, on the west elevation, will be offset so as not to impinge on the arrow slot. It will be a simple square opening. Windows: The shutters will be retained, and windows glazed behind. To be timber framed and set back. In the front garden area, the low stone wall will remain and the concrete will be dug out to see if flagstones are revealed. If not, flagstones will be laid for a more appropriate and in keeping look. To the exterior side, a larch screen will be erected to shield the view of ugly electricity sub station to the side.
3.0	Conservation Method Statement
	The principles of English Heritage's Informed Conservation will be applied. This document has been prepared with reference to: Design Principles for Development in the Staffordshire Moorlands With particular reference to: 1. Conversions 2. Repairs and Alterations to Historic Buildings Repairs to the historic fabric of the building will be minimal and only carried out where necessary. Existing materials will be re-used or new matching or reclaimed materials will be used wherever necessary and possible. Traditional techniques such as hydraulic lime mortar will be used where necessary. Any repair will be like for like.

	Any interior work will avoid the removal of features such as staircases, panelling, mouldings or internal spaces. Then historic development of the building should remain evident. With reference to the above, the barn is currently empty and in need of restoration work.
4.0	Planning Policy and Framework
	This document has been prepared with reference to: Historic England's Good Practice Advice (GPA) notes 1,2,3 (2015) is the national conservation guidance to support the NPPF policies and supersedes PPS5. Staffordshire County Council Historic Environment Record From Historic England's Good Practice Advice (GPA): • A positive strategy for conservation and enjoyment of the historic environment. • A positive strategy in the terms of NPPF paragraphs 9 and 126 is not a passive exercise but requires a plan for the maintenance and use of heritage assets and for the delivery of development including within their setting that will afford appropriate protection for the asset(s) and make a positive contribution to local character and distinctiveness. • This strategic approach can inform all aspects of the planning system by recognising and reinforcing the historic significance of places.

	From Historic England's Enabling Development and Heritage Assets. Historic Environment Good Practice Advice: • Section 5: A scheme design 53. The heritage asset is likely to be sensitive to change given its significance and therefore employing suitably experienced professionals is important. The conservation statement or management plan will inform both the conservation work and the new development and they may well be best handled as separate but linked design projects. Please refer to the Conservation Method Statement above. With reference to Historic England's Enabling Development and Heritage Assets: Historic Environment Good Practice Advice: • Section 4. Making the case for enabling development. Level of work to the heritage asset. 41 Sometimes a heritage asset will have deteriorated so much that its full repair would involve substantial and possibly speculative reconstruction that may even harm the significance of what remains. The effect of the repairs on the asset's significance will need to be understood using the usual NPPF criteria (Chapter 16), before making a balanced judgment about the merits of enabling development. Fortunately the listed building/heritage asset is on a good state of repair and any conservation work will be in accordance with the Conservation Method Statement of minimal intervention and like for like replacement if necessary.
