RUBBER

Equestrian Surfaces Rubber Crumb

Equestrian Rubber Crumb consists of 99.99% wire free rubber which has been processed through a granulator, washed then screened. The rubber is shredded to approximately 20mm in size and is suitable for riding arenas, gallops, lunge rings, turnout pens and horse walkers.

The Equestrian Rubber can be supplied to existing or new arenas and is best utilized on top of an Equestrian Silica Sand and Stabilising Fibre surface. The Equestrian Rubber gives additional frost resistance to the surface, it helps retain the moisture in the fibres preventing the rubber mixing in with the Silica Sand which is a common problem on Sand and Rubber surfaces.

Equestrian Surfaces Rubber provides a cushioned non-slip surface that is safe for both horse and rider.

We are able to provide 100% wire free Equestrian Rubber at an additional cost.

Please contact head office for additional information regarding this product.
