Firstly I have a few issues with the application, the plans have a slip road, I cannot see what would stop the traffic queuing at the lights using the slip road to jump the lights? This is a major accident waiting to happen regarding cars coming out of the drives and pedestrians walking. Also the slip road looks to be a one way system, so when we want to get in our drive we would have to wait for the lights to change and for a gap in the traffic to use the slip road. We will also have traffic queuing outside causing pollution, noise night and day and that will effect the health of locals
