Ash Bank Road, Werrington - Additional Noise Monitoring

Job Number: 100391	Date: 08 March 2022	Client: Countryside Properties
Prepared By: BB	Approved By: DS	

1. Introduction

- 1.1. This Technical Note (TN) has prepared by Air & Acoustic Consultants Limited (AAC) to detail the results of additional noise monitoring of HMYOI Werrington to further determine the levels of noise impacts that would be expected at the proposed residential development on Land off Ash Bank Road, Werrington.

2. Background

- 2.1. The monitoring has been completed to assess the potential impact as a result of individual noise events from HMYOI Werrington upon the proposed future residents of the application site. This monitoring was agreed in discussion with an environmental health officer (EHO) from Staffordshire Moorlands District Council to allay worries that noise from HMYOI Werrington might have adverse impacts on the proposed residential development adjacent.
- 2.2. Previously, noise monitoring showed that the noise levels adjacent to HMYOI Werrington were less than the criteria levels as specified within the BS:8233,2014 and WHO criteria for internal noise levels in residential properties. However, the following comments were received from Staffordshire Moorlands District Council Environmental Health Department.

"Environmental Heath recommend refusal of the application at this stage due to concerns about proximity of the proposed residential housing to a young offenders prison. The noise assessment/s indicate that noise caused by road traffic can be mitigated through appropriate sound insulation and appear to dismiss noise caused by the HMYOI as an issue. On site monitoring was not attended so assumptions have been made that noise on site is caused by road traffic rather than the H[MYOI].

"But it is our opinion that this development is positioning residential properties too close to a premises which houses young people with complex needs and vulnerabilities which can lead to anti-social noise breakout from the site. The nature of the noise and proposed proximity is likely to cause amenity issues for any future neighbours living close to the prison. The potential noise may include issues such as shouting, loud swearing, screaming and banging noise. Although not indicated as exceeding sound levels under current standards, the nature of the noise is likely to be problematic. The current buffer zone between the prison and residential

properties should be maintained to enable local residents and the HMYOI to co-exist with minimum adverse impact on each other."

- 2.3. Following these comments AAC consulted with the EHO at Staffordshire Moorlands District Council and agreed a new noise monitoring survey.
- 2.4. The consultation included a detailed discussion around the nature of the specific noise of concern and It was agreed that the survey would include a manned assessment during the installation and collection site visits and a 7 day long term unmanned survey, however, this would include the recording of audio files for any individual noise event that exceeded 60 dB(A) L_{AFmax} .

3. Noise Survey

- 3.1. An hour of attended noise monitoring was undertaken at two locations adjacent to the boundary of HMYOI Werrington on 21st February 2022 by two AAC surveyors. The locations are shown in [Figure 1](#).
- 3.2. At L1, to the south of the site, the dominant noise sources were rustling trees and road traffic from the A52. On one occasion people talking in the car park were audible, lasting for less than one minute. For a period of five minutes, a dog barking could be heard from the properties to the east of L1, at Salters Close. From this monitoring location, noise from cars entering and exiting the car park was not audible.
- 3.3. At L3, the location adjacent to the HMYOI Werrington car park, the dominant noise source was wind rustling the trees and road traffic on the A52. On two separate occasions people talking in the car park were just audible, however this lasted for less than one minute for each event. There were minimal cars entering and leaving the car park and it is estimated that there were less than ten movements during the time period of the attended noise survey. The only other source of noise heard from the YOI was a small tractor moving along the access road which lasted for approximately 30 seconds.
- 3.4. Noise monitors were left at the locations shown in [Figure 1](#) for 7 days which recorded specific noise events louder than 60 dB(A) L_{AFmax} . The monitors were collected on 28th February 2022 when a further hour of attended noise monitoring was undertaken, observations at each location are as follows.
- 3.5. At L1, to the south of the site, the dominant noise sources were rustling trees and road traffic noise from the A52. There was some talking and sports heard from the HMYOI Werrington sports fields which lasted for approximately four minutes. The other sounds which were heard from HMYOI Werrington were car doors closing and talking in the car park. There were a number of sounds heard that weren't associated with the YOI including squeaky gates and a generator being used.
- 3.6. At L3, the location adjacent to the HMYOI Werrington car park, the dominant noise source was wind rustling the trees and road traffic on the A52. There was some shouting heard from either HMYOI Werrington or the associated car park which was barely audible as well as some talking. The sound level recorded at the time of the shouting was 58.8 dB L_{AFmax} which (based on the WHO guidance) would not be considered high enough to wake a person at night even if they had their bedroom windows open.
- 3.7. The details of the monitoring equipment used is set out in [Table 1](#) and the monitoring positions are illustrated in [Figure 1](#).

Table 1: Noise Monitoring Equipment

Equipment Type	Manufacturer	Model	Serial Number	Calibration Due
Sound Level Meter		Model Lxt1	4740	
Pre-Amplifier	Larson Davis	PRMLxT1	71241	11/2023
Microphone		377BO2	334198	
Sound Level Meter	Larson Davis	Model 831	4743	12/2023

Pre-Amplifier		PRMLxT1	71272	
Microphone		377BO2	332048	
Calibrator	Larson Davis	Cal 200	17574	01/2023

Figure 1: AAC Noise Monitoring Locations

- 3.8. The weather conditions during the survey were generally influenced by high southern and westerly winds and the average daily temperature stayed between 4 and 7 °C for the whole survey period. There was rain on all of the monitoring days and this data during these periods is discussed below in [Section Error! Reference source not found.](#). Average wind speeds for the monitoring period were greater than 5 m/s during some periods.
- 3.9. The information provided in [Table 2](#), uses data from Weather Underground. The weather station is located to the north east of the proposed site, off the A52 (Station ID: ISTOKE72).

Table 2: Summary of Weather Conditions

Date	Temp (°C)	Wind Speed (m/s)		Wind Direction	Total Precipitation (mm)
		Average	Peak		
21/02/22	5.5	11.7	54.2	West	1.02
22/02/22	6.3	9.9	35.2	SW	1.52
23/02/22	6.2	13.8	45.2	SSW	1.52
24/02/22	2.7	8.2	29.5	WSW	2.79
25/02/22	4.7	5.9	28.6	West	0.00
26/02/22	4.3	10.5	38.1	SSE	0.00

Ash Bank Road, Werrington - Additional Noise Monitoring

Countryside Properties

Date	Temp (°C)	Wind Speed (m/s)		Wind Direction	Total Precipitation (mm)
		Average	Peak		
27/02/22	4.0	10.1	26.9	SSE	0.00
28/02/22	6.1	2.1	8.7	South	0.00

- 3.10. All recorded sound files from the monitoring have been reviewed to identify the source. There were 1270 sound files recorded at L1 and 606 were recorded at L3. The majority of recordings were of wind induced noise, with a number being related to some construction works happening close to L1, no sound files could be identified that could be attributed to HMYOI Werrington. A full list of identified sound files are provided in [Table A.1](#) for L1 and [Table A.2](#) for L3.
- 3.11. The new monitoring survey including the attended measurements and the recorded unattended sound files confirm the finding of the previous assessment.
- 3.12. Currently based upon the two separate 7-day noise surveys there is no evidence to support a conclusion that there is not a pattern of anti-social behaviour noise from the YOI or that there will be any adverse noise impacts at the proposed residential properties as a result of the activities attributed to HMYOI Werrington.
- 3.13. The updated noise monitoring survey added further confidence to the conclusions of the previous assessment that no adverse impacts are anticipated.

APPENDICES

Appendix A: Identified Sounds
