Submission: Objection

Comments: I object to this on the ground that this has a serious impact on the environment both before, during and after, the materials used are some of the most toxic, if there is a fire it is also highly toxic and cannot be contained as per last article i read about one of these. then when the batteries reach end of life what will be done with these ?. also what security will stop the public from breaking in and causing harm ? to many bads to very little benefit.
