

WINDOW Detail

Proposed work

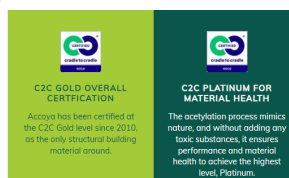

- To repair existing timber window frames where rotten.
- To install new timber casements (as some are rotten) to be fitted within the existing window frames, with new hinges, handles and stays matching existing ones.
- New casements to be fitted with plain glass and to be flush windows and not storm-proof windows as recommended by Heritage England and Staffordshire Moorlands.
- Existing sills to be sanded and any rotten timber cut away and new timber to be spliced in.
- All bare wood will be primed/undercoated.
- Trickle vents to be removed and holes to be filled and sanded. As recommended by Heritage England and Staffordshire Moorlands - no trickle vents.
- The stone mullions will not be removed or altered in any way.
- The new casements will be made with Accoya hard wood and any rotten timber cut away, with new Accoya hard work spliced in.
- Performance and sustainability together are what makes Accoya so unique. Accoya is a low maintenance dimensionally stable in both thickness and width. Accoya is sourced from fast growing, abundantly available sustainably certified forests. It is a sustainable wood an alternative to slow growth and often unsustainable hardwoods.
- We chose Accoya, even though it is more expensive, as it is a high quality, sustainable option that will last for over 50 years.

CRADLE TO CRADLE

C2C Gold overall and C2C Platinum for Material Health

Cradle to Cradle Certified™ is a globally recognised measure of safer, more sustainable products made for the circular economy. To receive certification, products are assessed for environmental and social performance across five critical sustainability categories: material health, material reuse, renewable energy and carbon management, water stewardship, and social fairness.

There is no brochure for these window designs as they are bespoke for each window. The joiner has prepared a detailed drawing below for your information.
