Submission: Support

Comments: The applicant has undertaken a full suite of ecology surveys, including both wintering birds and breeding birds. The amended details show that appropriate mitigation has been included to ensure biodiversity benefits across the site. The site has an efficient design which respects the local residents and community. I am in full support of this development due to the level of engagement, professionalism and thoroughness of the application. This is of vast difference to the proposed development SMD/2022/0343, which I continue to object to.
