Submission: Neither

Comments: It is disappointing that there is very limited public open space proposed, this means that the increase pressure on the local footpaths and public areas has not been addressed, including impacts to wildlife. Neither of the ponds have been eDNA'd for great crested newts, whilst one was noted as dry, I have seen this hold water most of the year, GCN are known in the general area. There are also willow tit known in the area, including a pair recorded adjacent to the site and will use young scrub such as that on the site.
