

Design and Access Statement

Stable Barn, Hunt House Farm

Installation of a Ground Mounted Solar PV System.

General

A 15 panel Ground Mount Solar PV System has been installed within land to the north west of the main house to help reduce the energy consumption of the property.

Design

A lot of thought was put in as to positioning of the system, the aesthetics and the visibility of the system within the surrounding area and the optimum position for generation. The land to the north west became the obvious choice.

Access

Our proposal will have no impact on access to and from the property or the surrounding area during and post installation.

Conclusion

The proposed installation will have minimal impact, visual or otherwise, on the surrounding area.
