Lighting Assessment for ATM Fascia Illumination

Reference: SMD/2022/0184

Location: Endon Garage, Leek Road, Endon, ST9 9BA

Objective: The objective of this proposed lighting design is for aesthetics, to highlight the location of the ATM.

Design Elements: The proposed lighting design will use a string of LEDs around the collar of the fascia to create a halo type illumination. The LEDs will be blue in colour and have a brightness of 100/cm2.

Environmental Impacts: The proposed lighting design is not expected to have any adverse environmental impacts, as the illumination level is low, and the lights are static. The low level of illumination and the fact that the lights are static also mean that there is minimal potential for light pollution or glare.

Community Impacts: The proposed lighting design is not expected to have any adverse impacts on the surrounding community. The low level of illumination and the fact that the lights are static mean that they should not create a distraction or impact on health and well-being, safety and security, or visual amenity.

Mitigation Measures: At the recommendation of the planning officer, timers can be installed to regulate the illumination of the LED lights. However, the proposed illumination is planned for 24 hours a day.

Overall, the proposed lighting design for the ATM fascia illumination at the service station appears to have minimal potential for adverse impacts on the environment and the surrounding community.
