Schedule of samples/details of proposed exterior lighting and associated illumination for development

This document seeks to provide information of all exterior illumination associated with development SMD/2020/0197 and seeks to satisfy Condition 12 within planning decision document issued 7th February 2022.

Contents:

1. Exterior front door lighting
2. Exterior car parking bay lighting

1. **Exterior front door lighting**

Proposed exterior lights are single fixed downfacing wall lights. An example of these can be seen here:

<https://www.tlc-direct.co.uk/products/GLWALL1LBK.html>

A down-facing black single wall light will be fixed to the exterior front-facing walls on both sides of the front doors of each dwelling. The fixture will light the space below, identifying the doorways and brightening entrances, whilst evading upward illumination and spreading light pollution. These lights will be sensor-operated with the option to set a light timer. This will reduce time of operation and illumination whilst ensuring safety. An element of light is required to guide residents to their front doors at times where there is a lack of natural light. This helps prevent slips, trips and falls. From an aesthetic perspective, these lights will add warmth to the outdoor space.

Figure 1: single fixed exterior wall light colour, brand may vary

2. Exterior car parking bay lighting

An exterior downfacing light will be installed at each car parking bay. An example of these can be seen here:

<https://www.tlc-direct.co.uk/products/GLWALL3L.html>

A single down-facing light will be fixed above each carparking bay (ie 1 light per household rather than 1 per car). These fittings will be sensor operated thus will not be in operation at all times. They are essentially a safety precaution for people entering and exiting their vehicles in the dark. Again, these lights are downfacing to reduce upward illumination, again preventing slips, trips and falls when residents are exiting vehicles and carrying shopping/ items to their residence.
