

Site as seen through a normal lens (as approx FFS 50mm FL*) in a single frame, cropped. As can be seen, the foreground tree screening is thick enough to conceal all the current low level development in the Forbidden Valley Area.

The same view with a wireframe overlay of the Proposed **Attraction** envelope (shown dotted) with key identification points used to calibrate the overlay.

The same view showing at x2 telephoto (as approx FFS 100mm). The Proposed **Attraction** would be completely screened from this Viewpoint
