I am sending this email in response to the planning application for the erection of steel frame units and 4 Biomass boilers at Woodyard off Draycott Cross Road, Brookhouses, Cheadle.

I am very concerned about the detrimental effect of the above application will have on the local environment, the pollution from 4 Biomass boilers will have a terrible impact on local wildlife and also will negatively affect the standard of life for residents.

I am at present in the process of selling my property on Commonside, 200yds from the proposed site and am very concerned that this application will deter possible buyers or dramatically affect the value of my property.

I have had several valuations of my property and if this application goes ahead I will be required to have my property revalued.

Regards Ian Barlow,
Wren Cottage, Commonside Cheadle.
