

At key gateways and junctions on the main recreational pathway, new timber finger posts and totems will be provided to aid orientation and direct visitors to the main facilities. A walking/running circuit is proposed that will be waymarked by distance/ challenge marker posts at set points around the route. Robust large section timber elements will be employed to fit within the rural character of the site. New information boards located at key positions along the route, in a matching timber construction.

In addition, signage is proposed at key access gates to identify the path type (bridleway/ footway/ cycleway).

All timber is to be pressure treated softwood to BS 4072 with all cutting/notching carried out prior to treatment. Construction to engineers details.
