**Submission: Objection**

Comments: Little to no thought has been given to the effect on wildlife in a sensitive area adjacent to lowland heath area, an extremely threatened habitat in the UK. Floodlights are required for the security of the site however these have been proven to disturb migrating species and will have an adverse affect on the biodiversity of the area. There are a variety of farmland birds in the area which are also in decline, as well as Schedule 1 breeding birds which use the site for hunting.

Further to its adverse affects on the local wildlife there are neighbouring properties that will be adversely effected by the noise and light pollution, as well as the site being inkeeping with the local area. Fields nearby use natural dry stone walls! And this of course will also effect nearby livestock that this submission seems to deny exists.

On a final note, the infrastructure required to transport materials to site is inadequate for the works required.

It would be more appropriate to use a brownfield site where better infrastructure is in place rather than using greenbelt land for activities of this nature.
