Good Morning

I've received a letter regarding the above and have to say it's a ridiculous idea.

Not only is it right next to a supported housing provider, the road although has a speed camera is lethal, tankers , lorries , thunder past which itself is not an issue however the thought of them having to slow even more to allow for traffic coming from every which direction is an accident waiting to happen. People already completely ignore the chevrons and drive straight on them . Although it's not an official pull in, people pull in there to allow police and emergency services to pass, this is daily. Lorry drivers use the layby to rest in.

The area for residents and shop/cafe takeaway / owners is great currently. Everything has closed by 11 - at the latest, so apart from people coming from the pubs it's quiet, the other thing is if people want a burger they can go McDonald's or up into town.

Don't forget we also have people frequently using the laundry service again ...traffic.

The traffic is horrendous trying to turn right towards Macclesfield out of Hibell Drive at the best of times, let alone another lane for people to negotiate as they cross onto the other side .

I'm surprised the pelican crossing is so far down Mill Street as the crossing man really does a great job getting people across but my goodness it's dangerous,..Mill Street is a lot wider than it actually looks.

There is no official dropped kerbs on to Mill Street Parade of shops/ cafes/ this in itself is an issue as people stop to turn realize there's a huge kerb stone and stumble as to what to do next.

The traffic going up into town is ridiculous - clear as a whistle down bank...yet for some reason it's jammed going up.

I also don't think there's a need for it. As stated above if people want a burger they've got takeaways in town or 24 hr maccies.

The shops and cafe provide everything you could need during 8am - 10pm which in a residential area is more than enough. It's a great community and serves the public very well

Thankyou

Susan Bailey
