Is the proposed development reasonably necessary for the purposes of agriculture?

- ☒ Yes
☐ No

If yes, please explain why

The building will cover 3 existing silage pits, each of which holds approximately 900 tonnes of silage. Although the silage is covered in plastic, rain water leeches down the side of each pit and into the silage. This collects nutrients from the grass as it passes through. The resulting effluent then runs out of the pits and is collected in a large underground tank. Once full, the tank is emptied by means of a vacuum tanker and then spread on the farm. This inevitably occurs during wet weather and the effluent is spread onto already saturated land. The purpose of the roof is to prevent the ingress of water and its resulting pollution.

Is the proposed development designed for the purposes of agriculture?

- ☒ Yes
☐ No

If yes, please explain why

Please see above
