OBJECTION

I strongly object to this application, the vast and disproportionate size of this site situated in the locality of the 5x BESS sites and Huge Solar Farm

The fire risk and resultant pollution is a great concern as there is such a large number of batteries. Is there any realistic possibility of ever isolating any of them if a fire occurred?

Planning policy states nothing should be built on Green Belt land except in exceptional circumstances, which clearly this is not...

I object to the sheer size of the proposal and the negative visual impact that would result, besides the negative impact on the local flora, fauna and wildlife.

There is a very real danger of fire, leading to explosion, thermal runaway and toxic clouds! Local residents would also be subjected to noise, increased volumes of construction and maintenance traffic and other nuisances and disruptions to their daily lives.
