

Existing Hawthorn hedgerow to be retained forming boundary treatment to the perimeter of the extended Lawn Cemetery

Grave positions orientated to face North east to match the existing Lawn Cemetery

Where tree roots are deemed to inhibit the positioning of traditional burial graves the identified plots are only appropriate for cremated remain memorials

Existing Hawthorn hedgerow boundary treatment up to the field gated entrance to be retained

Existing opening in the hedgerow providing access to the proposed new Lawn Cemetery is to remain and used in conjunction with the proposed extended path

Existing Grounds Maintenance Shed

Burial Plots 181 + 14

Additional planting and habitat measures to compensate for the required biodiversity net gain requirements to be provided in strict accordance with the ecologists report

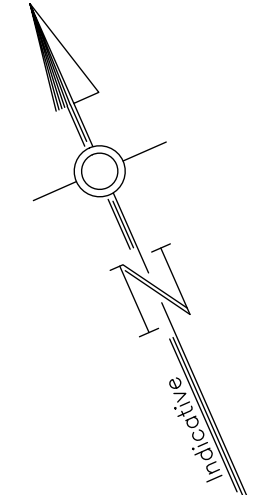

New Hedge planting to the remaining north east and south east boundaries of the site to match the existing.

Site levels to be marginally amended to create level paths between grave rows.

Trafficked paths to be supported with grasscrete plastic hexagon mesh overlaid with a 20mm sharp sand sand binding, topsoil and grass.

Provision for 181 standard graves and 14 proposed cremation memorial plots within the 1,743sq M site

Areas within the site extending beyond the positions of the graves and paths currently defined as scrub land within the biodiversity net gain appraisal are to largely remain as scrub to limit loss of habitat
