Hi Alex,

I have had a look at the revised planting scheme report. It marries in much, much better with the initial BNG report than previous.

My only comment would be to add a section to the end of the introduction to show the LPA that it has been designed around the BNG metrics we have done. Something

1.1.5 The planting scheme contained within this report intends to deliver on an overall Biodiversity Net Gain of 17.41% (Area habitat) and 153.99% (Linear approved by SMDC).

Other than that, I think it ticks the 'BNG boxes' that we need to deliver on.

Kind regards,

Mark.
