Side Elevations

Anderton Litecast is a unique concrete mix designed to offer all the characteristics and durability of traditional concrete but significantly lighter. Both Litecast slotted fence posts and fence panels contain steel reinforcement that further enhances the strength of the products; and the concrete mix is Sulphur resistant too.

Manufactured to exacting standards under stringent factory controlled conditions, Litecast fencing products are lightweight, aesthetically pleasing and offer a long lasting solution for any fencing project.

Anderton Litecast fence posts have been independently tested at a NAMAS registered laboratory.

Using the Anderton range of concrete slotted posts is an ideal way to produce high quality fencing together with the 'recessed' infill gravel boards offer great strength and long term robustness.
